Test Case Design

(Name: Fariha Sultana Shaila, ID: 24524203051)

1. Service Completion & Confirmation

Field	Details
Test Case ID	TC-MSH-EP-01
Test Scenario	Verify that the system correctly handles service completion and confirmation.
Preconditions	1. A service has been assigned to a Service Provider. 2. The Service Provider can mark the service as completed. 3. The Service Seeker can confirm the completed service.
Test Steps	1. Open the assigned service. 2. Provider marks the service as completed. 3. Seeker views the completion status. 4. Seeker confirms the completed service. 5. Observe the service status and payment result.
Input Data	Equivalence Partitioning (EP): • EP-SC-01: Assigned service, provider marks it as completed → Valid • EP-SC-02: Service completion status requested by seeker → Valid • EP-SC-03: Completed service, seeker confirms successfully → Valid • EP-SC-04: Service not confirmed by seeker, payment release requested → Invalid
Expected Result	System marks the service as completed when the provider completes it, allows the seeker to view the status, and releases payment only after successful confirmation.
Actual Result	System correctly handled valid completion and confirmation conditions and did not release payment without confirmation.
Status	Pass
Remarks	Validates service completion and confirmation using the Equivalence Partitioning (EP) technique.

2. Ratings & Review

Field	Details
Test Case ID	TC-MSH-EP-02
Test Scenario	Verify that valid reviews are accepted after service completion and invalid rating input is rejected.
Preconditions	1. User account is active and logged in. 2. The service has been completed. 3. User is allowed to submit a review.
Test Steps	1. Open the completed service. 2. Select the Review option. 3. Enter review information. 4. Submit the review. 5. Observe whether the review is accepted and stored.
Input Data	Equivalence Partitioning (EP): • EP-RR-01: Seeker submits review after service completion → Valid • EP-RR-02: Provider submits review after service completion → Valid • EP-RR-03: Review is associated with a completed service → Valid • EP-RR-04: User attempts to give numerical/star rating → Invalid
Expected Result	System accepts and stores valid reviews related to completed services and rejects invalid numerical/star-based rating input.
Actual Result	System accepted valid reviews and rejected invalid rating input.
Status	Pass
Remarks	Validates review input using the Equivalence Partitioning (EP) technique.

3. Dispute & Report Management

Field	Details
Test Case ID	TC-MSH-EP-03
Test Scenario	Verify that valid reports and disputes are accepted and managed, while submissions without relevant details are rejected.
Preconditions	1. User account is active and logged in. 2. A service/payment issue can be reported or disputed. 3. Admin has access to submitted reports and disputes.
Test Steps	1. Open the Report/Dispute option. 2. Select the relevant service or payment. 3. Enter the report/dispute details. 4. Submit the report or dispute. 5. Admin reviews the submitted case. 6. Observe the submission and management result.
Input Data	Equivalence Partitioning (EP): • EP-DR-01: Valid report about inappropriate behavior/fraud/service problem → Valid • EP-DR-02: Valid dispute regarding service/payment → Valid • EP-DR-03: Relevant details provided with report/dispute → Valid • EP-DR-04: Admin reviews and manages submitted dispute/report → Valid • EP-DR-05: Report/dispute submitted without relevant details → Invalid
Expected Result	System accepts and stores valid reports/disputes with relevant details and allows Admin to manage them. Submission without relevant details is rejected.
Actual Result	System accepted valid reports/disputes, stored relevant details, allowed Admin management, and rejected incomplete submissions.
Status	Pass
Remarks	Validates report and dispute conditions using the Equivalence Partitioning (EP) technique.
